SYNERGY: THE KEY TO OBTAINING RESULTS THAT WOULD NOT BE INDIVIDUALLY ACHIEVABLE

Klemi Contact and bda connectivity consolidate their partnership by working towards common values

Bda connectivity and **Klemi Contact** wish to convey the values that have united them in recent years to the visitors of **SPS ITALIA**, the landmark exhibition for smart production solutions, held in Parma from 24 to 26 May 2022.
SPS Italia is a unique opportunity for visitors to meet with both business realities and learn about their synergy and passion aimed at achieving total customer satisfaction through customised and high-quality products.

Klemi Contact *is a family company* that provides its customers with a complete product portfolio and 360-degree services in the field of electrical-industrial wiring and automation components. Their products range from cable processing machines to storage systems, including fuses, fuse holders, connectors, and terminals (Klemi Contact is also the only official Italian supplier and the largest in Europe of the Stocko Contact brand).

The synergy with **bda connectivity** originates from the wish to focus one's efforts on one of the key players in the cabling industry, because never before has the quality of cables been so important.
A high-quality cable makes the difference not only in terms of transmission characteristics and safety, but also for its easy-to-handle features during its processing.

For this reason, **Klemi Contact** relies on **bda connecticty** as a guarantee of undisputed quality.

Although the cost of cables only minimally affects the total cost of an installation, some people opt for low quality cables, which expose the finished product to a dangerous situation. The risks are many, the most serious ones, such as faults in electrical systems, are the second most common cause of fire. Furthermore, low quality cables are more time-wasting due to their stripping and processing than high-quality extruded cables characterised by attention to the smallest details.

bda connectivity, a German company based in Asslar, Germany, produces special cables and EMC measurement systems, which are synonymous with guarantee and quality. For over 60 years the company has been active in the world of communication and connectivity, creating special cables optimized for multiple applications: for customers in the electrical and electronic sector, for telecommunications network operators, wholesalers of electrical equipment, the automotive industry as well as for the electro-medical sector.
The BDA specialists constantly participate in national and international standardization committees, and for this reason the company can guarantee qualitatively valid and reliable products over time.
